ThreatConnect

FLASHPOINT

ThreatConnect & Flashpoint Intelligence

Overview

The ThreatConnect Platform was specifically designed to help users understand adversaries, automate workflows, and mitigate threats faster using threat intelligence.

By leveraging insights from the Deep & Dark Web (DDW), Flashpoint delivers Business Risk Intelligence which empowers business units and functions across organizations with a decision advantage over areas like cybersecurity, fraud, insider threats, physical security, and M&A.

Fully integrated, this solution enriches threat data and creates intelligence to provide insights to teams and prioritize their efforts. The ThreatConnect Platform provides a central place for users to see all their team's data, analyze that data, and integrate all of their security tools. By utilizing Flashpoint Finished Intelligence, Risk Intelligence Observables datasets, and Technical Indicators, the solution delivers greater visibility than ever into threats, empowering experienced and entry-level users alike with the context they need to make better risk decisions about threats relevant to them.

The Flashpoint & ThreatConnect Advantage

This solution leverages data from the DDW safely to supplement investigations with targeted data from highly curated sources, making it available in a single platform. This solution provides organizations with a strategic advantage when analyzing its data, and amplifies the powers of their security infrastructure.

FINISHED INTELLIGENCE

The Finished Intelligence dataset provides access to analytical reports produced by Flashpoint subject matter experts. These human-digestible intelligence reports cover a wide spectrum of illicit, underground activity, from cybercrime & hacking, to fraud, emergent malware, DDoS intelligence, hacktivism, violent extremism, and physical threats.

RISK INTELLIGENCE OBSERVABLES

The Risk Intelligence Observables (RIOs) dataset provides a high-fidelity feed of cyber observables that customers can integrate with their security operations to give them decision advantage. RIOs enrich user data with additional context, empowering customers to better understand and mitigate risks.

TECHNICAL INDICATORS

Enable users access to indicators of compromise (IOCs) and technical data across Flashpoint data sets and those included in Finished Intelligence Reports, allowing for seamless integration into users' workflows and automated tools.

Key Features

● Apply Threat Intelligence for Enhanced Detection and Prevention

ThreatConnect allows organizations to send threat intelligence to tools (like a SIEM or a firewall) as indicators of compromise and rules. This threat intelligence includes Technical Indicators as they relate to the DDW and strategic insights on TTPs and threat actor activity from Finished Intelligence. Organizations can instantly see Platform ratings and observation count per indicator or incident.

● Provide Context to Flashpoint Datasets with CAL (Collective Analytics Layer)

By distilling billions of data points from thousands of analysts and sources worldwide, ThreatConnect's CAL offers immediate insight into how widespread and relevant a threat is, providing global context that has never before been available. Insights from CAL provide additional context to information shared in Finished Intelligence and RIO datasets to enable the network defender and intelligence teams to remediate and take relevant action to support their business operations.

● Understand the Adversary with MITRE ATT&CK™

ThreatConnect and Flashpoint both have native MITRE ATT&CK functionality, providing organizations with a common language across the technology solutions. Intelligence is tagged with all related Techniques from the MITRE Pre-ATT&CK and Enterprise ATT&CK Datasets enabling classification for further analysis and action.

How to Get Started

If you already have a ThreatConnect account, contact your Customer Success Engineer or Sales Engineer for more information about this integration

ABOUT FLASHPOINT

FLASHPOINT

Flashpoint delivers Business Risk Intelligence (BRI) to empower business units and functions across organizations with a decision advantage over potential threats and adversaries. The company's sophisticated technology and human-powered analysis enable enterprises and public sector organizations globally to bolster cybersecurity, confront fraud, detect insider threats, enhance physical security, assess M&A opportunities, and address vendor risk and supply chain integrity.

For more information, visit **www.flashpoint-intel.com**
or follow us on Twitter at **@FlashpointIntel**

ThreatConnect™

Designed by analysts but built for the entire team (security operations, threat intelligence, incident response and security leadership), ThreatConnect's intelligence-driven security operations platform is the only solution available today with intelligence, automation, analytics, and workflows in a single platform. Centralize your intelligence, establish process consistency, scale operations, and measure your effectiveness in one place. To learn more about our threat intelligence platform (TIP) or security orchestration, automation, and response (SOAR) solutions, visit ThreatConnect.com.
