

ThreatConnect for Incident Response

Elevate Your Incident Response With Threat Intelligence and Automation

With the ThreatConnect TI Ops Platform, you're able to centralize your intelligence and automate your processes out of one platform, maximizing insights, efficiency, and collaboration:

Make Your Incident Response Fast, Precise, and Effective

Speed is critical when responding to an incident. Minimizing the spread of a threat actor can be the difference between an immaterial and material breach. Precision is also important, ensuring a threat is dealt with effectively. ThreatConnect's Playbook and Task Automation leveraging low-code, drag and drop simplicity enables automation of critical tasks and processes used by the IR team.

Capture Insights and Knowledge from Incidents

ThreatConnect is your single location to capture knowledge and insights from IR work, as well as serve as a place to document all actions and notes related to cases, artifacts, or evidence in a structured format. This gives security teams efficient and rapid access to each other's notes and provides additional context when they need it.

ThreatConnect's native Cases feature allows for relevant intelligence and data to be centrally gathered and leveraged by incident responders.

If using other ticketing solutions, like Jira and ServiceNow, the Platform provides a wide-variety of integration options provided through pre-built Apps and Playbooks, and our API.

Make Incident Response More Consistent and Efficient

ThreatConnect Workflows enable IR teams to embed and follow defined processes and activities in their incident response activities. Consistent and repeatable incident handling is required to ensure compliance with industry, regulatory, and legal standards and requirements. Workflows are a powerful feature to ensure IR and other teams are all aligned and working fast and efficiently when handling incidents.

Improve Collaboration and Communication

For all stages of incident response, communication is critical. Collaboration features are baked into the Platform, and information can be shared through integrations with other collaboration tools like Slack and Teams.

An Example of ThreatConnect in Action

Maximize Efficiency with Automation, Workflow, and Cases

ThreatConnect automates data enrichment and case creation for smarter and faster incident response activities. ThreatConnect provides a central location for security analysts and incident responders to record, analyze, and interact with all information related to the case at hand.

Make Incident Management Smarter and Seamless

During response efforts, having everyone involved in an incident operating from the same intelligence and knowledge, regardless of what case or ticket system they are using, is critical. The ThreatConnect Platform connects a wide-variety of tools and automates knowledge capture and dissemination to ensure everyone is on the same page, working quickly and efficiently to resolve the incident.

Create Threat Intelligence from Cases

Whether you are using the native case functionality in the Platform or integrating it with another ticketing system or incident response platform, it allows you to add intelligence captured from working those cases back into the Threat Library. This allows your team to maximize insights and close the threat intelligence loop to help ensure you make better decisions in the future.

● The ThreatConnect TI Ops Platform

The cybersecurity environment continues to grow more challenging. Security teams are often overwhelmed by the constant stream of threats, and system vulnerabilities, against the backdrop of limited resources and immature processes.

The Platform operationalizes threat intelligence and knowledge to drive every decision and action faster to maximize impact with increased effectiveness, efficiency, better decision-making and strategic collaboration.

The benefits of the ThreatConnect TI Ops Platform are clear - your security team will move from reactive to proactive engagement. Your team will better leverage risk insights and more effectively use threat intelligence and knowledge to drive better decisions and more effective action.

Reach out to learn how the ThreatConnect TI Ops Platform can make you and your IR team more effective, decisive, and collaborative.

ThreatConnect.

ThreatConnect enables threat intelligence operations, security operations, and cyber risk management teams to work together for more effective, efficient, and collaborative cyber defense and protection. With ThreatConnect, organizations infuse ML and AI-powered threat intel and cyber risk quantification into their work, allowing them to orchestrate and automate processes to get the necessary insights and respond faster and more confidently than ever before. Over 200 enterprises and thousands of security professionals rely on ThreatConnect every day to protect their organizations' most critical assets.
