ThreatConnect

ThreatConnect for Security Operations

Maximize the Efficiency and Performance of Your Security Operations

With the ThreatConnect Platform, you're able to centralize your intelligence and automate your processes, delivering multiple benefits and return on investment for your business.

Maximize Insights and Reduce False Positives

Automatically identify false positives in your threat detection tools, like SIEM, EDR, and NDR so that the security operations center (SOC) team can focus on triaging legitimate alerts and prioritizing the most critical threat. By cross-checking the data with ThreatConnect's CAL™ (Collective Analytics Layer) your team will maximize insights about potential threats. This helps determine where a deeper investigation is needed with customized workflows and playbooks.

Maximize Efficiency With Consistent and Repeatable Processes

With ThreatConnect Playbooks, you can automate tasks, processes, and playbooks to make teams more efficient, consistent, and effective. Track metrics on completion, and time and dollars saved to demonstrate return on investment and the value of applying automation to security activities.

Maximize Team Collaboration

Security operations teams benefit from operating out of a single platform to do their jobs with common workflows, automated tasks and processes, and built-in case management. Easily integrate your preferred collaboration tools across the security team, IT and the business, like Jira and Slack with the ThreatConnect platform for a seamless experience.

Maximize Team Efficiency and Effectiveness

Opportunities to make analysts' work faster, easier, and more meaningful is critical to successful security operations. ThreatConnect reduces the time it takes to onboard new analysts. Analysts get up to speed faster as they are working out of a single pane of glass with the knowledge and tradecraft of the collective team captured and embedded in workflows, and task and playbook automation. Analysts can be much more efficient, effective, and happier as they can focus on the critical activities required to defend the organization from attacks, rather than doing mundane work or focusing on the activities with low value.

THE CHOICE OF THE GLOBAL 2000

Nearly 200 enterprises worldwide protect their organizations with ThreatConnect

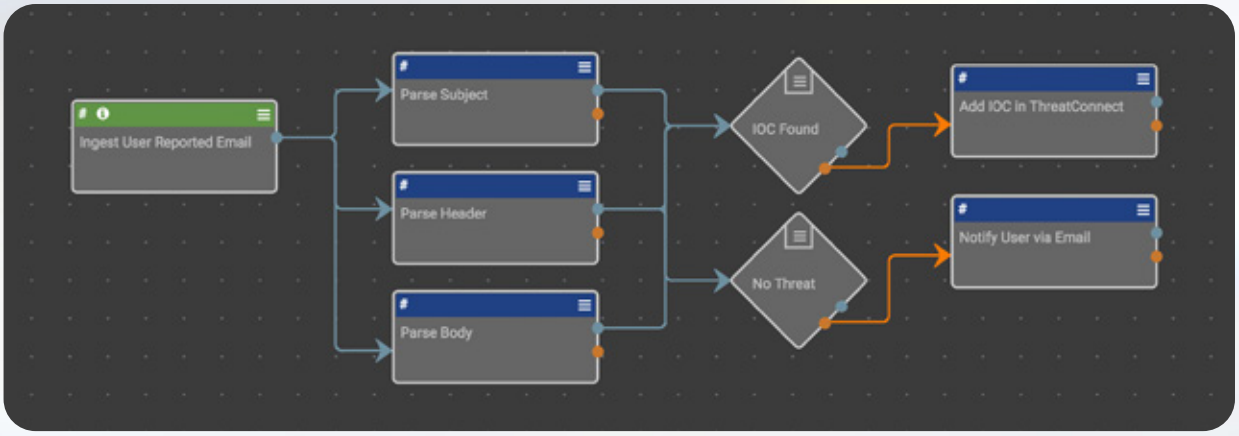
An Example of ThreatConnect in Action



Maximize Efficiency – Automate the Management of Phishing Emails

Dealing with the management of user-reported phishing emails, sifting through the information manually to identify legitimate threats, and acting accordingly is an extremely time-consuming process. Do it in seconds, not minutes or hours, with ThreatConnect.

Does Automation need to be "Automate"?

ThreatConnect allows your team to set up a single centralized mailbox for the reporting of potential phishing emails from all sources. When the mailbox receives a message, a Playbook can be automatically launched to automate the analysis and corresponding response efforts.

Maximize Insights – Identify Malicious Emails Faster

Reported emails are parsed for indicators, which are extracted from the email. Those indicators are automatically correlated against the centralized Threat Library within ThreatConnect. Malicious emails identified will trigger an automatic initiation of response efforts.

Faster Response to Reduce Risk

Emails containing malicious indicators can trigger immediate response efforts such as user and administrator notifications, s well as orchestrating with other tools to take action, like deleting the email across all mailboxes, blocking indicators extracted from the analysis. and blocking future emails. False positives can be identified rapidly, and the user will be promptly notified.

The ThreatConnect Platform

The cybersecurity environment continues to grow more challenging. Security teams are often overwhelmed by the constant stream of threats, and system vulnerabilities, against the backdrop of limited resources and immature processes.

The ThreatConnect Platform uniquely leverages risk insights and automation to help focus limited organizational resources on the organization's top priorities. The Platform operationalizes threat intelligence and knowledge to drive every decision and action faster to maximize impact with increased effectiveness, efficiency, better decision-making and strategic collaboration.

The benefits of the ThreatConnect Platform are clear - your security team will move from reactive to proactive engagement. Your team will better leverage risk insights and more effectively use threat intelligence and knowledge to drive better decisions and more effective action.

Reach out to learn how the ThreatConnect RQ can make you and your team more effective, decisive, and collaborative.

ThreatConnect.

By operationalizing threat and cyber risk intelligence, The ThreatConnect Platform changes the security operations battlefield, giving your team the advantage over the attackers. It enables you to maximize the efficacy and value of your threat intelligence and human knowledge, leveraging the native machine intelligence in the ThreatConnect Platform. Your team will maximize their impact, efficiency, and collaboration to become a proactive force in protecting the enterprise.
