

ThreatConnect

Low-Code Automation

Build Powerful Playbooks Using an Easy Drag-and-Drop Interface

Playbooks help automate your critical cybersecurity tasks by connecting security technologies and processes together. Threat Intel and Security Operations analysts are buried with too many tasks and need an easy way to automate their most important tasks and processes.

ThreatConnect's Low Code Automation enables the full automation of almost any cybersecurity task using an easy drag-and-drop interface – minimal coding is needed.

Maximize Efficiency with Low-Code Automation

Drag-and-drop tools are faster and easier to use than manually coding Playbooks. You can go from concept to a full automated Playbook in just a few hours. Drag-and-drop coding is a more visual and user-friendly way to build automations. This saves your valuable time so you can ensure you have all the mission-critical Playbooks you need.

Full Automation of Your Playbooks Gives You the Tools to Win

ThreatConnect's Low-Code Automation empowers analysts to rapidly build out Playbooks for tasks like data enrichment and automated malware analysis. Full automation is the key to rapid response and threat mitigation enabling teams to make faster and better decisions and reduce the room for error.

Key Features Provide Power and Flexibility

Low-Code Interface

Powerful and intuitive drag-and-drop does it all. ThreatConnect uses Triggers (e.g., a new IP address Indicator, a phishing email sent to an inbox) to pass data to apps, which perform a variety of functions, including: data enrichment, malware analysis, and blocking actions. This means less to manually code, as coding takes time, may require additional training, and can limit the number of team members that can support developing Playbooks.

Templates For Consistency and Speed

TI and Security Ops analysts can choose from ThreatConnect-provided Playbook templates or build custom templates based on their specific requirements and use cases.

Support for Your Full Ecosystem

Automate sharing threat intelligence to a variety of consumers, such as security tools or trusted partners. ThreatConnect's hundreds of integrations and apps support a wide variety of popular security and IT technologies, such as SIEMs, EDRs, firewalls, and more. With ThreatConnect's flexible API, it's also easy to integrate new technologies into the ThreatConnect Platform.

"ThreatConnect has allowed us to automate many processes and workflows, which would otherwise take analysts dozens of minutes or even hours to complete, allowing our analysts to focus their time on more advanced analysis and reporting tasks."

— Threat Intelligence Analyst,
ThreatConnect Customer

"ThreatConnect Low Code Automation enables our security analysts to rapidly design and deploy fully automated Playbooks. We can build them faster, more accurately, and deploy them with full automation in response to potential new threats."

— Security Operations Center Manage,
ThreatConnect Customer

GENERAL DYNAMICS
Information Technology

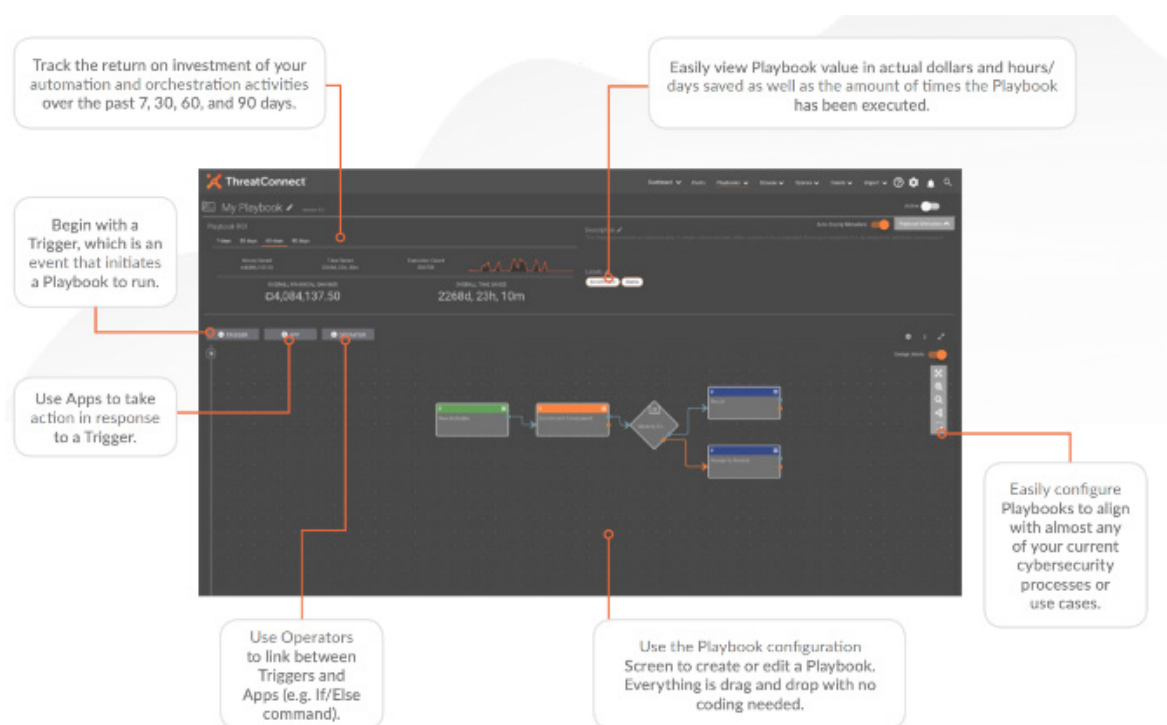

Low-Code Automation Brings Time to Value

Gain Efficiency and Improve Consistency for Time Saving ROI

Low-Code Automation enables TI Ops and SecOps teams to gain efficiencies, improve consistency, and increase overall effectiveness. The teams gain these benefits by standardizing on specific processes and workflows, and automating repetitive tasks, processes, and playbooks. This generates significant ROI for security teams by reducing the manual burden on analysts.

Playbooks Enable You to Move Proactively to Mitigate Threats

Threat intelligence and security operations teams can leverage ThreatConnect Playbooks to move faster to proactively address threats that can potentially impact your enterprise. Automated Playbooks can reduce risk and potentially eliminate the unexpected and massive cost of a cyber breach.

Leverage the Power of the ThreatConnect Platform

The ThreatConnect Platform uniquely leverages automation to help focus limited organizational resources on the organization's top priorities. The Platform operationalizes threat intelligence to drive quicker decisions

that maximize impact with increased effectiveness, efficiency, better decision-making and strategic collaboration.

The benefits of the ThreatConnect Platform

are clear—your security team will move from reactive to proactive engagement, and will maximize the value of threat intelligence and knowledge to drive better decisions and more effective action.

Reach out to learn how the ThreatConnect platform can make you and your team more effective, decisive, and collaborative.

ThreatConnect enables threat intelligence operations, security operations, and cyber risk management teams to work together for more effective, efficient, and collaborative cyber defense and protection. With ThreatConnect, organizations infuse ML and AI-powered threat intel and cyber risk quantification into their work, allowing them to orchestrate and automate processes to get the necessary insights and respond faster and more confidently than ever before. Over 200 enterprises and thousands of security professionals rely on ThreatConnect every day to protect their organizations' most critical assets.
