ThreatConnect.

Fortune 500 Software Leader Leverages ThreatConnect Across Security Teams to Improve Threat Detection and Response

"ThreatConnect allows our organization to collect, analyze, and share intelligence with various teams in a single platform, effectively reducing the amount of time needed for an analyst to produce actionable intelligence."

– Threat Intelligence Analyst, Fortune 500 Software Company

About the Company

A Fortune 500 computer software company that provides open source software with offerings focused on DevOps, including operating systems platforms, storage, and more, leverages the ThreatConnect Platform for its cyber threat intelligence operations.

Business Challenges

Before using ThreatConnect, they were overwhelmed by the noise from its security tools, and intelligence feeds. Without automation, their security team was spending a significant amount of time on manual processes like aggregating and acting on threat intel. They knew these manual processes were not scalable and that they needed a platform that was flexible enough to meet the needs of its various security teams.

Why They Chose ThreatConnect

They knew they needed to find a partner that could meet their use cases and criteria for flexibility, scalability, performance, and usability.

They selected ThreatConnect because the Platform mapped to their specific use cases, including generating strategic intel, threat hunting, and threat detection and prevention. ThreatConnect also allowed the teams to scale and improve performance using automation and orchestration across the tens of millions of IOCs and the sizeable number of events and alerts from their existing tools.

Benefits of Using with ThreatConnect

They see immense value in using ThreatConnect, noting that the Platform is "extremely important" to their cyber threat intelligence operations. ThreatConnect has improved its organizational performance across its people, processes, and tools. By using a single Platform, they improved collaboration between its CTI team and other security teams and the effectiveness of its security tools, like SIEM, EDR, XDR, and SOAR, with high-fidelity threat intelligence and automated workflows.

They saw a 100% improvement in time saved and analyst efficiency due to the Platform's automation capabilities.

"ThreatConnect allows us to automate many processes and workflows, which would other-wise take anlysts dozen of minutes or even hours to complete, so our analysts can focus their time on more advanced analysis."
