ThreatConnect for
Security Leadership

Modernize Your Security Operations

Digital business transformation is expanding attack surfaces and strains legacy approaches to security operations, enabling attackers to win. Security teams need to modernize to keep up with their businesses. ThreatConnect infuses threat and risk intelligence across security teams and the business to give you an unfair advantage over the attackers. Threat intelligence management, knowledge capture, low-code automation, and the ability to orchestrate across your security controls all from a single platform is the modern way to protect, detect, and respond to increasingly persistent and hostile attacks.

Maximize Analyst Efficiency – Automate Manual Tasks

By automating previously very manual tasks, you can empower your analysts to focus their attention on tasks that better serve their skillset. ThreatConnect enables task automation and decision-making orchestration with flexible, low-code automation of Playbooks.

Demonstrate ROI for Security

Automated metrics and KPIs are built into the ThreatConnect Platform making it fast and easy to monitor how security functions are performing and the ROI being generated. An ROI Calculator is built into every Playbook. Customizable metrics tell you, based on how many times any given Playbook has been run, how much your organization has saved to date.

Maximize Team Efficiency and Effectiveness

Security teams are in a state of flux. Opportunities to make analysts' work faster, easier, and more meaningful is critical to a successful security function. ThreatConnect reduces the time it takes to onboard new analysts. Analysts get up to speed faster as they are working out of a single pane of glass with the knowledge and tradecraft of the collective team captured and embedded in workflows, and task and playbook automation. Analysts can be much more efficient, effective, and happier as they can focus on the critical activities required to defend the organization from attacks, rather than doing mundane work or focusing on the activities with low value.

Make Incident Response and Threat Hunting Faster and Easier

Leveraging threat intelligence, workflows and automation to accelerate incident response is critical to minimize the impact of threats and attacks to your organization while making the analysts' job easier. Finding and expelling the threats that got through your defenses is critical, but operationalizing threat hunting can be hard. You need a single place to integrate tools, automate searches, and easily visualize related threat intelligence, data and context.

Move From Reactive to Proactive

Maximize Your Team's Efficiency and Improve ROI with ThreatConnect

With the ThreatConnect Platform, you and your security team will become more efficient and effective. Security leaders have a single view of how security operations is performing through dashboards, reports, and built in metrics, providing maximum insights.
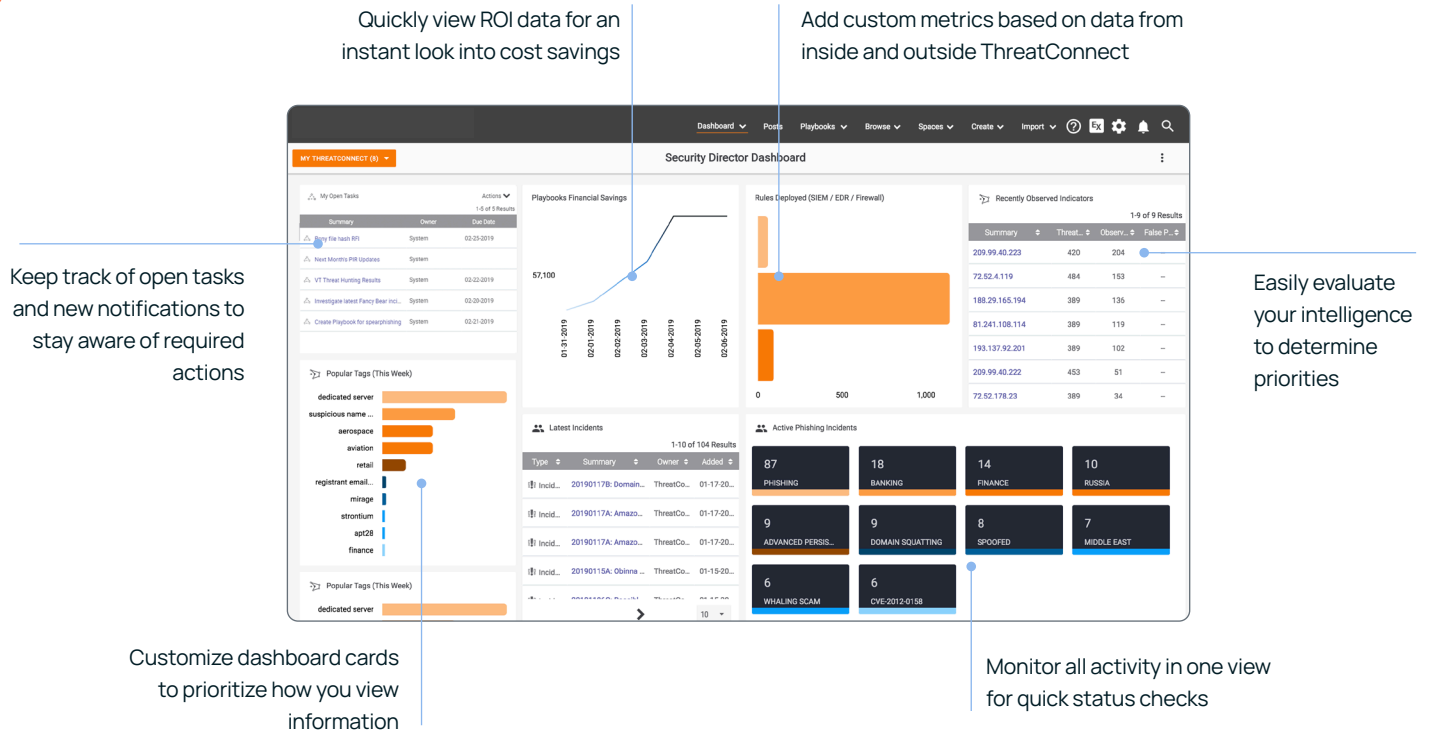

Prevent, Detect and Respond to Threats Faster

Operationalizing cyber threat intelligence across security functions is a critical element to proactively improve your defenses against threat actors. Human intervention can slow things down and reduce efficiency. Applying automation to tasks, processes, and workflows reduces the effort required to manage and apply threat intelligence, while improving detection and response times. Threat intelligence management combined with automation is a potent combination that will give your security teams the advantage over the attackers.

An Example of ThreatConnect in Action:

Maximize Insights and Collaboration With ThreatConnect

The ThreatConnect Platform gives you a single pane-of-glass view of how security functions are performing through customizable dashboards, reporting, and metric. Easily visualize data that shows the impact of your security teams' efforts and gain a better understanding of the threats your organization faces. Monitor your threat intelligence and security operations in a way that is actionable and meaningful for you and your team.

Quickly view ROI data for an instant look into cost savings

Add custom metrics based on data from inside and outside ThreatConnect

Keep track of open tasks and new notifications to stay aware of required actions

Easily evaluate your intelligence to determine priorities

Customize dashboard cards to prioritize how you view information

Monitor all activity in one view for quick status checks

● The ThreatConnect Platform

The cybersecurity environment continues to grow more challenging. Security teams are often overwhelmed by the constant stream of threats, and system vulnerabilities, against the backdrop of limited resources and immature processes.

The ThreatConnect Platform uniquely leverages risk insights and automation to help focus limited organizational resources on the organization's top priorities. The Platform operationalizes threat intelligence and knowledge to drive every decision and action faster to maximize impact with increased effectiveness, efficiency, better decision-making and strategic collaboration.

The benefits of the ThreatConnect Platform are clear - your security team will move from reactive to proactive engagement. Your team will better leverage risk insights and more effectively use threat intelligence and knowledge to drive better decisions and more effective action.

Reach out to learn how the ThreatConnect Platform can make you and your team more effective, decisive, and collaborative.

ThreatConnect.

By operationalizing threat and cyber risk intelligence, The ThreatConnect Platform changes the security operations battlefield, giving your team the advantage over the attackers. It enables you to maximize the efficacy and value of your threat intelligence and human knowledge, leveraging the native machine intelligence in the ThreatConnect Platform. Your team will maximize their impact, efficiency, and collaboration to become a proactive force in protecting the enterprise.
