Build a **Unified Threat Library**

Establish a Single Source of Truth to Operationalize your Threat Intelligence

Leverage the ThreatConnect Platform to ingest real-time data from a wide range of l threat intelligence sources into a single repository and automatically aggregate, correlate, enrich, and operationalize the data so your Threat Intel Ops and Security Operations teams get the highest fidelity intelligence to power their decision-making on potential and active threats.

ThreatConnect Advantage:

Solve Threat Intel Big Data Management Challenges

Our robust and extensible data model ingests your structured and unstructured data across disparate tools and normalizes and deduplicates it, breaking the data out into unique indicators and groups based on related behaviors and relationships. View and explore relationships between threat actors, campaigns, incidents, and indicators all in a single Platform.

Prioritize Threats with Report Cards and Native Scoring

Gain real-time insights into intel source quality and insights into indicators with Report Cards. A ThreatAssess score provides a single, actionable score to convey an indicator's reputation to prioritize threats for investigations, detections, and response efforts, and ThreatConnectCAL™ provides exclusive global insights from the ThreatConnect community on how widespread and relevant a threat is to organizations like yours.

Speed Up Analysis with Built-in Enrichment

Out-of-the-box Enrichment adds relevant context to indicators, including score, Tag, Domain, Country, First and Last seen, etc. Enrichment speeds up analysis by assessing the maliciousness of an indicator and its links and dependencies to other indicators so analysts can perform more efficient and effective investigations.

Upstream Intel Sharing

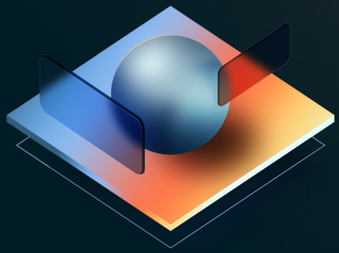
Share enriched threat intelligence in a standardized way with other groups or associations through a variety of connectivity options including Apps, API, STIX/TAXII, etc. Ingest this information to make fast decisions about the data coming from your SIEM, firewall, EDR, etc., and act fast to mitigate threats.

Share Intel with Customized Reporting

The normalized data with a common structure from your unified Threat Library makes it easy to easily collaborate and share information on threats w sith leadership and stakeholders to make strategic, tactical, and operational decisions and evangelize the value of threat intelligence in your organization.

Benefits

- Speed up data analysis
- Prioritize critical threats
- Faster decision-making during investigation, detection, and response
- Increased detection efficacy
- Improved collaboration between CTI and security operations teams

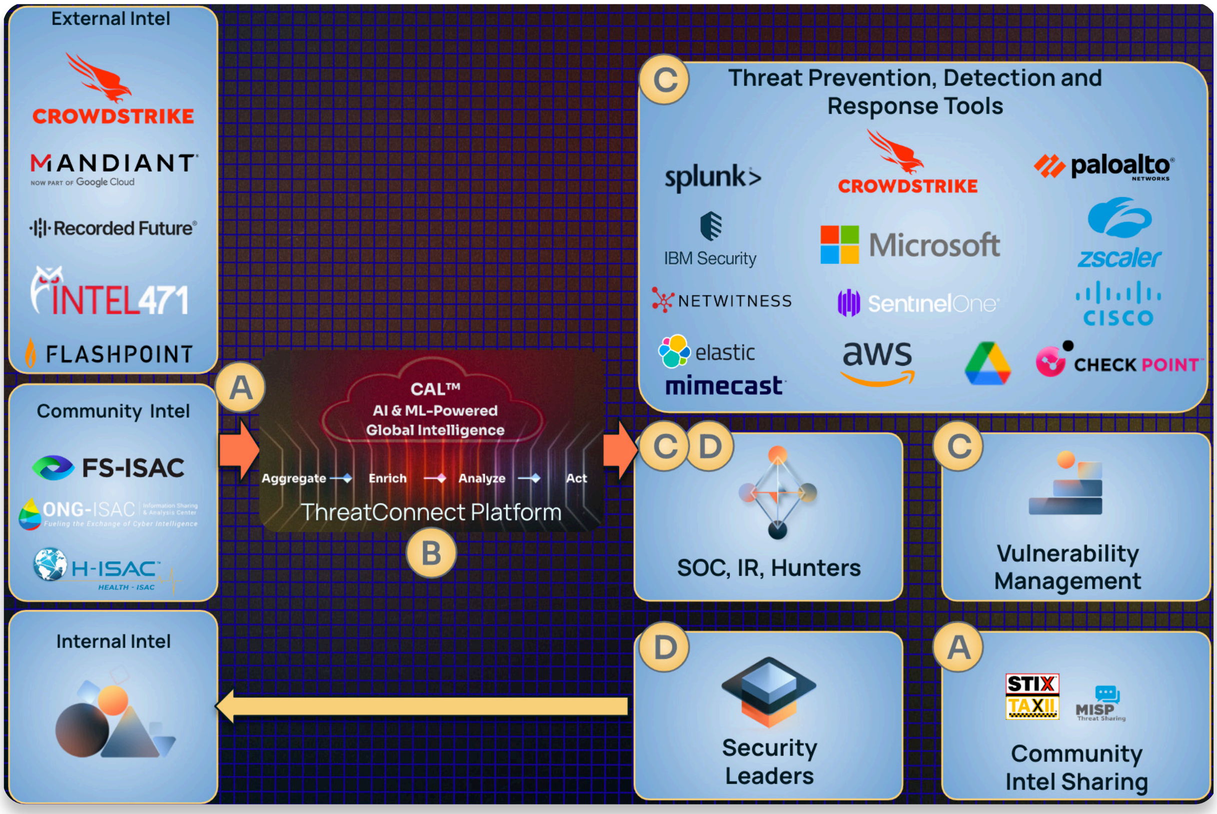


> "ThreatConnect provides our CTI analysts with a centralized place to store all IOCs and share them amongst our several security teams."
>
> —Incident Responder, Enterprise Computer Software Company

How it Works and Outcomes

- Aggregate, normalize, and enrich intelligence from a wide variety of commercial and community sources into a Threat Library, a common source of threat intelligence truth.
- Analyze, prioritize, and produce high-fidelity threat intel with built-in enrichment and indicator scoring powered by CAL™.
- Act on high-fidelity threat intel by disseminating to your threat detection and prevention tools like SIEM, and endpoint, network, and cloud security tools, and stakeholders.
- Share intel in real-time with trusted communities and peers.

> "ThreatConnect is our central repository that helps us integrate with other tools and distribute intel in a more effective manner."
>
> —Head of Threat Intelligence, Global 500 Insurance Company



A Connect external and internal intel sources, and share with partners via Integrations, Apps, API, STIX/TAXII

B Use the Common Data Model, Threat Library, Built-in Enrichment, CAL™, ThreatAssess Scoring in the Platform to ingest, normalize, score, and enrich threat intel

C Take action using Low-code Automation, Playbooks, & Apps

D In-Platform Reporting for disseminating intel to stakeholders

ThreatConnect.

ThreatConnect enables threat intelligence operations, security operations, and cyber risk management teams to work together for more effective, efficient, and collaborative cyber defense and protection. With ThreatConnect, organizations infuse ML and AI-powered threat intel and cyber risk quantification into their work, allowing them to orchetrate and automate processes to get the necessary insights and respond faster and more confidently than ever before. Over 200 enterprises and thousands of security professionals rely on ThreatConnect every day to protect their organizations' most critical assets.
