

Multi-Environment Orchestration:

Run Any Playbook Across Any Environment, In Real-Time

ThreatConnect's Multi-Environment Orchestration expands the capabilities of Playbooks, which allows you to automate almost any cybersecurity task. Once an action is triggered in the Platform, Apps within each Playbook coordinate those actions such as quarantining a host, conducting malware analysis, or blocking with your firewall. With multi-environment orchestration, these **Playbooks can now run Apps seamlessly between environments, including cloud environments, your office network, or virtual environments.**

Centralize Your Intelligence and Security Process Management

- Use intelligence for relevance and context to make informed, data-driven decisions
- Assign tasks across ticketing systems to coordinate team efforts
- Manage all of your Environments from one Platform and monitor from one screen

Complete End-to-End Orchestration and Automation

- Standardize actions and awareness across all Environments
- Orchestrate each step from a central Playbook regardless of location: virtual or on-prem, local or global
- Record and measure all actions in a single system of record for future reference and reporting

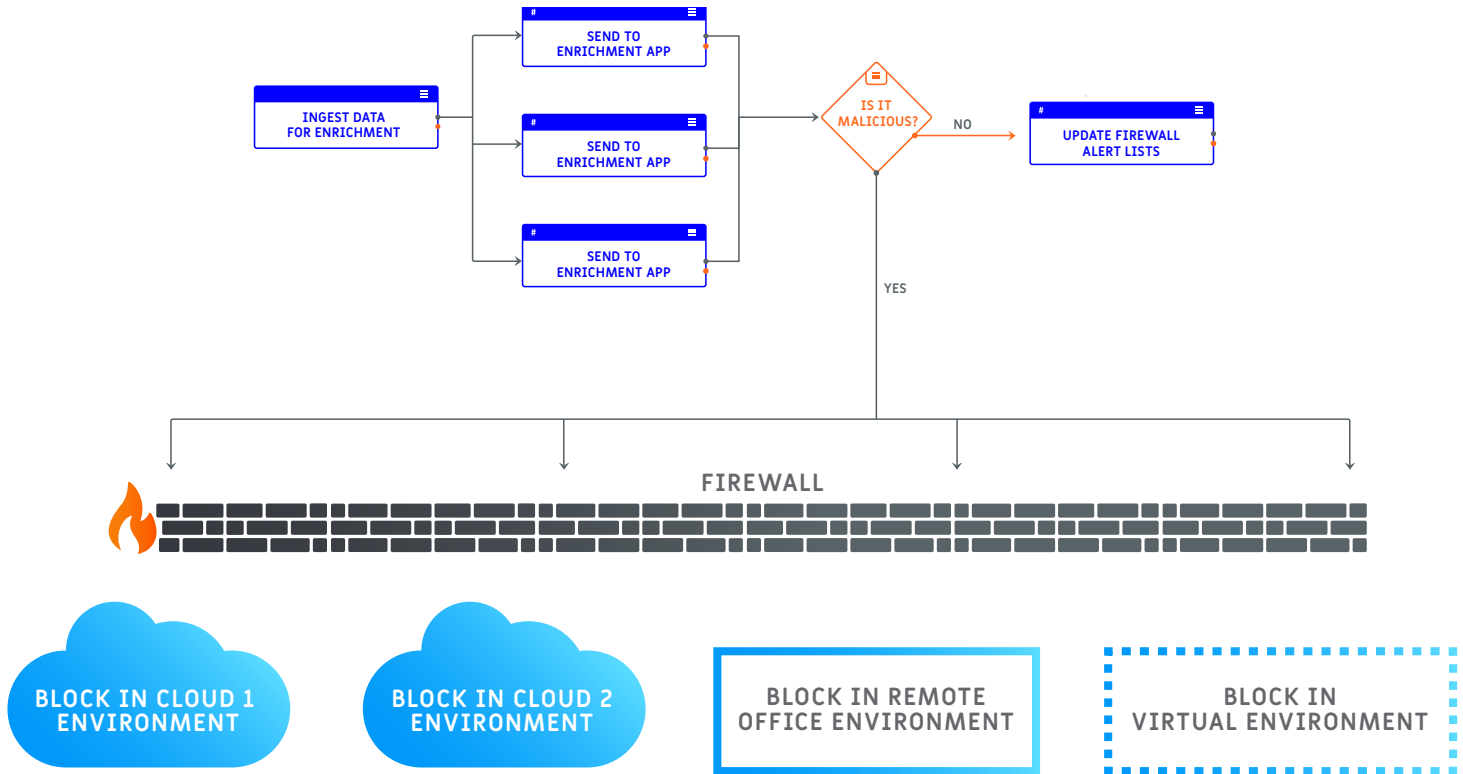

Save Your Team Time

- Take action (e.g. block in firewalls) across multiple Environments simultaneously
- Easily duplicate and customize Playbooks as needed to adapt to unique Environments or threats
- Time consuming tasks are reduced from hours to seconds

Multi-Environment Orchestration in Action

Example: Automating the ingestion and blocking of malicious indicators across various Environments with a single Playbook.
