

Uniting Cybersecurity **People**, **Processes**, and **Technologies** Behind an Intelligence-Driven Defense

Fragmentation in security operations is prevalent throughout government agencies of all sizes. When security teams don't collaborate and tools don't communicate, critical gaps emerge. Today's adversaries are smart. They know how to exploit these vulnerabilities to compromise your agency's data. ThreatConnect helps close the gaps in your security practice.

ThreatConnect is a software platform that unites your entire security team, your partners, and your trusted organizations together behind a cohesive, intelligence-driven defense. Working together in ThreatConnect, everyone benefits from the collective talents and knowledge of the group. You're able to build processes to identify the most relevant threats, proactively protect your network, and quickly respond to incidents in a measurable way.

ThreatConnect easily integrates with your existing security products, intel feeds, and enrichment tools so that you can use it as the central hub for your entire security infrastructure. With more than 50 integrations, ThreatConnect is able to ingest data from and push relevant threat intelligence into existing endpoint protection devices, other security tools, and your SIEM. The platform makes your security products smarter, faster, and more effective.

People Working Together in One Place

Your Security Teams, Your Agency, Your Trusted Partners

Security Operations Center/IR/TI Teams

More than 30 United States departments, agencies, and armed forces branches work together seamlessly using ThreatConnect. These teams use ThreatConnect to collaborate in one place, to automate actions and get the most out of existing security products.

- **Manage Access:** collaborate with only those you've explicitly invited
- **Fuse Internal & External Data:** prioritize for faster analysis
- **Form a Complete Picture:** synthesize data together for a fuller understanding of threats

Private Communities of Partners

With ThreatConnect, your security team is no longer confined by data gathered solely within a team or with your agency. ThreatConnect's private communities give you the power to share information with vendors, trusted partners, and your supply chain. The dashboard allows you to show enrichment from different data sources so you can see which communities are providing the most relevant data for your security infrastructure.

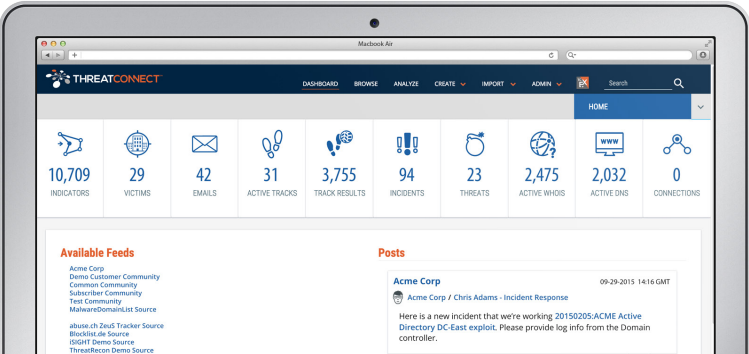

- **Share Data & Store:** benefit from everyone's collective knowledge
- **Improve Efficiency:** use workflows to ensure maximum efficiency
- **Leverage Automation:** triage events faster and eliminate mundane tasks

Public Communities of Peers

Using ThreatConnect, you can evaluate and compare threat intelligence gathered by a global community of intelligence experts, including ThreatConnect's research team. You'll gain a broader understanding of the evolving threat landscape, and receive experienced guidance on when and how to act.

- **Collaborate on Specific Objectives:** focus on emerging cyber threats or long-term missions
- **Defend Proactively:** use intelligence from others to stop attacks before they happen
- **Strength in Numbers:** collaborate with 9,000 individual users and 20+ public communities

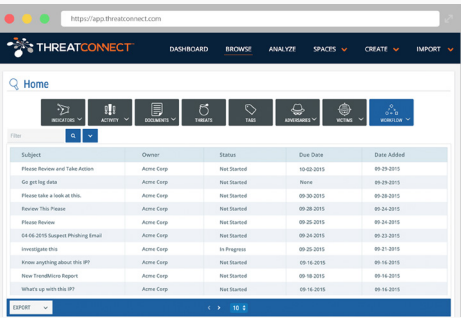

“THE SITUATIONAL AWARENESS AND EDUCATION OBTAINED THROUGH THREATCONNECT IS WORTH ITS WEIGHT IN GOLD.”

– U.S. Federal Agency

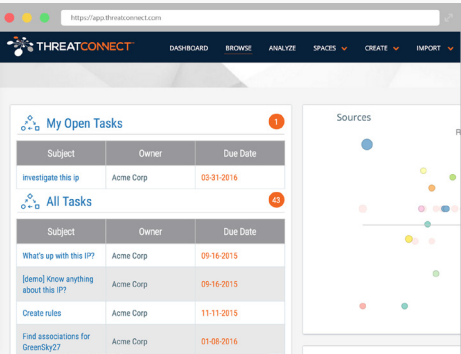

Build Processes to Identify, Protect, and Respond

Use Leading Cyber Threat Analysis and Response Methodologies

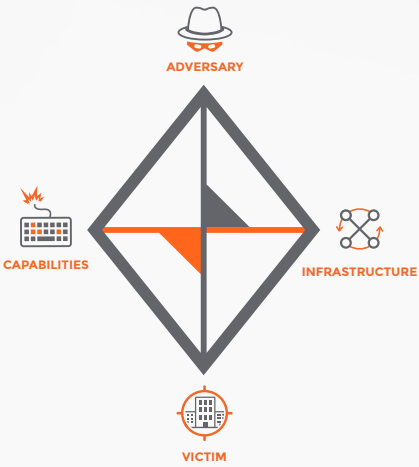

Manage in One Place

Build processes to manage your security infrastructure from one central hub.

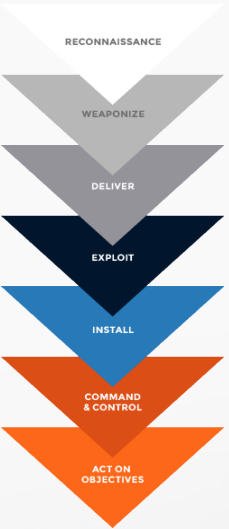

Built-In Workflows

Build cyber threat analysis and response processes based around ThreatConnect's built-in workflow features and integrations with leading security products.

Diamond Model

ThreatConnect is built around the Diamond Model for Intrusion Analysis. This proven Department of Defense threat intelligence methodology enables you to gain a complete understanding of an adversary or event. Using the Diamond Model, analysts can derive a multi-dimensional picture of the underlying relationships between threat actors and their tools, techniques, and processes (TTPs).

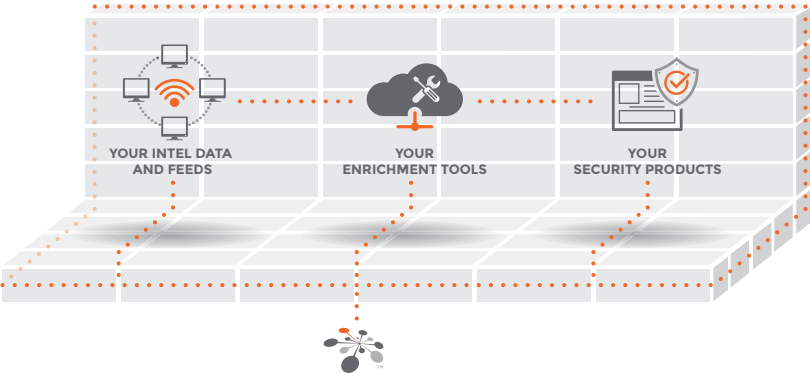

Kill Chain and Beyond

ThreatConnect also supports the Kill Chain and other common threat intelligence methodologies. Thanks to ThreatConnect's flexibility and configurability, analysts and security teams are not constrained to a single way of operating. The platform can be configured to match and enhance your current internal workflow and processes.

Make Your Current Security Technologies Better, Smarter, and Faster

ThreatConnect Integrates with More than 50 of the Most Widely-Used Security Products.

THE THREATCONNECT PLATFORM

ThreatConnect Powered by SAP HANA

ThreatConnect Powered by SAP HANA supercharges your data ingestion, analysis, and ability to deliver actionable results. Structured, unstructured, and streaming data can be fused and correlated immediately. When a cyber attack is in progress, or when a breach occurs, every second matters. The ThreatConnect platform with this increased capability eliminates critical seconds in the incident detection and response process, and delivers added depth of analysis for improved protection.

Increase Speed and Performance

- Automated operations to cut down precious time
- Increased processing speed enables broader automation
- Dramatically reduce the manual labor of analysis

More Powerful Extensibility

- Build, host, and share custom applications to accomplish business or mission relevant operations within the ThreatConnect platform
- Create advanced analytics, security workflows, and network protection with 50+ supported integrations with ease

Improve Threat Hunting on Your Network

- Added speed allows you to reach deeper into your own network, even while new data is coming in
- Form a comprehensive picture of threats to your business
- Act more quickly to profile and interdict threats that already exist
- Gather intelligence to shape a proactive posture against threats that are still emerging

Improve Ability to Identify and Prioritize Threats

- Easily aggregate and normalize threat data from any source or format – real-time or historical
- Pivot on enriched intelligence more quickly to discover patterns and context about an indicator

Features and Benefits of the Platform

ThreatConnect Helps Agencies of All Sizes:

- ▶ Determine which intelligence feeds provide the most relevant data for your team to analyze and act on
- ▶ Pull all structured and unstructured threat data into one centralized platform including leading threat intelligence feeds and STIX-formatted data
- ▶ Automate normalization of data and allows teams to analyze and pivot between different data points to uncover patterns
- ▶ Integrate and connect all of your current critical network security products with ThreatConnect's flexible API
- ▶ Reduce or eliminate manual tasks, allowing teams to focus on resolving real threats
- ▶ Evaluate groups and incidents and create incident, adversary, and threat reports in PDF format for executive review
- ▶ Share threat intelligence with vendors, partners, and communities including ISAC, ISAO, and privately managed communities
- ▶ Create tactical playbooks for teams to ensure the best possible defense is in place, using all resources effectively
- ▶ Build, host, and share secure customized applications right in the platform through TC Exchange

Discover the Benefits for Your Agency

The ThreatConnect platform offers agencies of all sizes a place to start, with room to grow. Whether you're running a mature threat intelligence program, or working as a team of one, ThreatConnect will scale to meet your needs. Join more than 30 United States government departments, agencies, and branches in taking a proactive posture against cyber threats.
